2.2 – Empathy Map Canvas

The Empathy Map Canvas helps understand the thoughts, emotions, needs, and behaviors of customers who use online food ordering platforms. It provides insights into consumer expectations and the factors that influence their food ordering decisions.

Think and Feel

Customers value convenience, quick service, affordable prices, and high-quality food. They expect accurate order delivery, attractive discounts, secure payment options, and a smooth ordering experience. They also seek variety in cuisines, personalized recommendations, and reliable customer support. Their primary concerns include food quality, delivery delays, hidden charges, and order accuracy.

See

Consumers are exposed to advertisements, promotional offers, social media food trends, customer reviews, restaurant ratings, influencer recommendations, and visually appealing food images. They compare multiple food delivery applications before placing an order and are influenced by seasonal offers, cashback, and loyalty programs.

Hear

Customers receive recommendations from friends, family members, colleagues, online communities, and social media influencers. They also hear about new restaurants, discount campaigns, limited-time offers, and customer experiences through reviews, advertisements, and word-of-mouth communication, which significantly affect their purchasing decisions.

Say and Do

FOOD_ORDERING_BEHAVIOUR AND CONSUMER TRENDS: A STRUCTURED ANALYSIS OF CHOICES AND HABITS

Customers frequently browse food delivery applications, compare restaurant ratings and prices, explore different cuisines, apply coupons, choose convenient payment methods, and place orders based on their preferences and budget. They often provide ratings, write reviews, share experiences on social media, and recommend their favourite restaurants or delivery platforms to others.

Pains

Common challenges faced by customers include delayed deliveries, incorrect or missing items, poor food quality, high delivery charges, limited payment options, unavailable menu items, technical issues in mobile applications, and inconsistent customer service. These problems reduce customer satisfaction and may discourage repeat orders.

Gains

Customers seek fast and reliable delivery, fresh and hygienic food, affordable pricing, attractive discounts, multiple payment options, real-time order tracking, personalized recommendations, responsive customer support, and a seamless digital ordering experience. Meeting these expectations increases customer satisfaction, loyalty, and repeat purchases. Overall, the Empathy Map Canvas provides a customer-centered understanding of food ordering behaviour and consumer trends. It helps restaurants and food delivery platforms identify customer needs, address pain points, enhance service quality, and develop strategies that improve the overall customer experience while supporting data-driven business decisions.
