2.3 – Brainstorming

Brainstorming is an essential step in developing this project, as it helps identify the key factors that influence consumer food ordering behaviour and the trends that shape their purchasing decisions. The brainstorming process began by exploring the rapid growth of online food delivery services and understanding how digital platforms have changed the way people order food. Various ideas were generated to determine the most important aspects of consumer behaviour, including customer demographics, preferred cuisines, ordering frequency, spending patterns, payment methods, delivery preferences, customer ratings, discounts, promotional offers, and overall satisfaction. The discussion also focused on identifying the challenges faced by customers, such as delayed deliveries, high delivery charges, incorrect orders, limited restaurant choices, and inconsistent food quality. In addition, ideas were generated on how restaurants and food delivery platforms can improve customer experience by offering personalized recommendations, faster delivery services, attractive loyalty programs, and secure payment options. The project team further explored how data analytics and visualization could be used to transform raw food ordering data into meaningful insights. Interactive dashboards, charts, and stories were planned using Tableau to effectively represent consumer trends and ordering patterns, while Python (Flask) was selected for web integration to provide users with an interactive platform for accessing the analysis. Brainstorming also helped define the objectives of the project, identify relevant data fields, select suitable visualization techniques, and determine the best methods for presenting insights to stakeholders. The ideas generated during this stage contributed to

FOOD_ORDERING_BEHAVIOUR AND CONSUMER TRENDS: A STRUCTURED ANALYSIS OF CHOICES AND HABITS

designing a structured approach for analyzing customer behaviour, identifying market trends, and supporting data-driven decision-making. Overall, the brainstorming process played a crucial role in shaping the project's direction by encouraging creative thinking, problem-solving, collaboration, and innovation, ultimately leading to the development of a comprehensive analysis of food ordering behaviour and consumer trends that can help businesses improve customer satisfaction, enhance operational efficiency, and achieve sustainable growth in the competitive online food delivery industry.
