

## CHAPTER – XI

### FUTURE SCOPE

#### 11.1 - Future Scope

Future Scope of Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Orders and Habits

The following key points:

- Use AI to recommend personalized food items based on customer preferences and order history.
- Analyze live customer orders and trends to support faster business decisions.
- Predict future food demand using machine learning to improve inventory management.
- Provide customized offers, discounts, and meal recommendations based on individual ordering habits.
- Connect Tableau dashboards with mobile applications for real-time business monitoring.
- Analyze customer ordering behaviour across different cities and regions using maps.
- Analyze customer reviews and feedback to improve food quality and service.
- Use analytics to optimize delivery routes, reducing delivery time and operational costs.
- Store and analyze data on cloud platforms for better scalability, security, and collaboration.
- Develop advanced interactive dashboards to help restaurants and food delivery companies make informed decisions, improve customer satisfaction, and increase profitability.
